

**Amendments to the Claims:**

Claims 1-15 (Canceled).

16. (Original) A method of deploying a mitral valve therapy device within the coronary sinus of a heart adjacent the mitral valve annulus, the method including the steps of:

- A. providing an elongated flexible guide wire having a cross sectional dimension;
- B. feeding guide wire into the coronary sinus of the heart;
- C. providing an elongated flexible guide tube having a proximal end, a distal end, a lumen, and a side port communicating with the lumen;
- D. feeding the guide tube into the coronary sinus of the heart with the guide wire extending through the lumen from the distal end to and through the side port;
- E. providing a mitral valve therapy device configured to be slidably received within the lumen of the guide tube, the device including a proximal end;
- F. providing a flexible elongated introducer configured to be slidably received within the lumen of the guide tube, the introducer having a distal end;
- G. placing the device into the guide tube lumen;
- H. placing the introducer into the guide tube lumen;
- I. engaging the distal end of the introducer with the proximal end of the device;
- J. pushing the device with the introducer in a distal direction within the guide tube lumen until the device is at least partially encircling the mitral valve within the coronary sinus of the heart; and
- K. releasing the device from the guide tube into the coronary sinus of the heart adjacent to the mitral valve annulus.

17. (Original) The method of claim 16 wherein the step of placing the device into the guide tube lumen includes the step of placing the device on the guide wire.

18. (Original) The method of claim 16 wherein the step of placing the introducer into the guide tube lumen includes the step of placing the introducer on the guide wire.

19. (Original) The method of claim 16 including the further step of providing a delivery slot in the guide tube proximal to the side port and communicating with the lumen, and wherein the releasing

step includes the step of advancing the device from the lumen through the delivery slot and into the coronary sinus.

20. (Original) The method of claim 16 wherein the releasing step includes the step of releasing the device from the distal end of the guide tube.

21. (Original) The method of claim 16 wherein the step of placing the device into the guide tube lumen includes placing the device on the guide wire and wherein the step of releasing the device includes releasing the device from the distal end of the guide tube.

22. (Original) The method of claim 21 including the further step of testing the effectiveness of the device while the device is on the guide wire.

23. (Original) The method of claim 16 including the further step of withdrawing the introducer, the guide tube, and the guide wire from the coronary sinus.

24. (Original) The method of claim 16 wherein the guide wire is visible under X ray fluoroscopy and wherein the method includes the further steps of:

inserting a second wire into the circumflex artery of the heart, the second wire being visible under X ray fluoroscopy;

subjecting the heart to X ray fluoroscopic examination to visualize the crossover point of the guide wire and the second wire; and

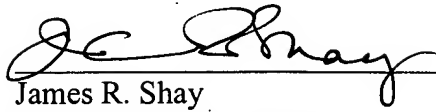

releasing the mitral valve annulus therapy device within the coronary sinus in a position such that the device is proximal to the crossover point of the guide wire and the second wire.

Application No.: 10/659,010  
Preliminary Amendment dated April 29, 2005

Respectfully submitted,

Date: April 29, 2005
